[Briefly about my future](#)

[I'm always open to new and interesting projects](#)

I put so much spirit into the work I'm doing, so I believe in success. I have a great desire to work and develop professionally. I take responsibility for tasks and deal with them effectively. I like to work in a team because I think that I can always learn from my project teammates.

## My life

My friends taught me to play the guitar when I was 11. Later I played the African djembe. Since then I like to play it whether alone or not. In my free time, I am fond of recording and DJing. Together with my wife, we often go running and cycling. We love to travel despite COVID :). And of course, I can't but mention the time I spend on self-education.

## My destiny

I used to work as a sound engineer. But one way or another, I came across programming, though I considered it too difficult to start WEB developing. I created my first simple landing pages in **WordPress** and native **HTML + CSS**. But then I came up with the idea of making the websites more interactive. And started learning **JS** with **Jquery**. It seemed to be just another way of self-development until I realized that I was really into programming. So, my hobby has become my new profession. And I really hope to become a good full-stack developer.

## Briefly about my experience

I started out as a freelancer for my friends. Worked with **HTML + CSS + JQyery + JS**. I joined the **Noer** in 2017. And I continued projects by adding **VUE + Webpack + Figma + TargetProcess + Git** to my stack. The **Politico** project has been of great benefit. Here I dive deeper into using the technologies I already knew. In addition, I realized the need and began to use **Jira + Jest + Accessibility + BrowserStack + Storybook**. At **Politico**, I had 6 sub-projects with different teams. And I really liked the practice of **Code review + Scrum + English practice**.

### Last projects:
